

Press release

Child hearing assessments go digital with launch of C.H.A.T.

The Child Hearing Assessment Toolkit (C.H.A.T.) is an easy-to-use resource designed to simplify the lives of educational audiologists, teachers of the deaf and hearing resource teachers.

Scottsdale, Arizona (June 26, 2013) – Phonak today launches the Child Hearing Assessment Toolkit (C.H.A.T.) at the EAA Summer Conference 2013. This new web-based tool allows hearing care professionals working in education, such as the educational audiologists attending EAA, to go digital—selecting, filling out and managing their patient assessments on any laptop, desktop PC or tablet device.

C.H.A.T. is located at www.chatbyphonak.com and loads in any web browser, just like a regular web site. However, as soon as the tool has been used once when connected to the internet, it can subsequently be accessed—on the same device—*without* the need for an internet connection (offline). Therefore if a school does not offer visitors access to the internet, a hearing care professional can still access C.H.A.T. to fill out new assessments and view previous results.

C.H.A.T. spans five categories of hearing assessment and related functions —Listening, Communication Access, Placement, Self-Advocacy, and Educational Performance—and currently features more than ten assessments. These include: The Functional Listening Evaluation by Cheryl DeConde Johnson; the Children's Auditory Performance Scale (C.H.A.P.S.) by Smoski, Brunt and Tannahill; and the Classroom Participation Questionnaire by Stinson, Long, Reed, Kreimeyer, Sabers and Antia.

Free & fully featured

The most complete collection of pediatric hearing assessments available online, C.H.A.T. is completely free to use and includes numerous useful features:

- **Auto-Save**
Assessment data are saved automatically
- **Click-To-Score**
Assessment scores are calculated at the click of a button—no calculator required
- **Print/Create PDF**
Completed assessments can be printed and downloaded as PDF files
- **Share**
Individual assessments can easily be shared—just click to create a unique assessment link, then email this to a parent/child to have them input their answers (all other data remain private)
- **Work Offline**
Select and fill out assessments without the need for an internet connection
- **Manage**
Add new assessments under an existing child's name, edit previous assessments, view a child's assessment history, and create patient profiles (including audiogram results)

"C.H.A.T. is a readily accessible tool that I'm sure will benefit educational audiologists and teachers of the deaf. It is convenient to use and with its wide range of assessments covers a broad range of scenarios," says Cheryl DeConde Johnson, Ed.D., The ADEvantage Consulting, Adjunct Assistant Professor, University of Arizona, and Graduate Lecturer, University of Colorado, University of Northern Colorado.

Maarten Barmantlo, Group Vice President Marketing for Phonak adds, “Since we work closely with these professionals every day, we know that many of them find dealing with paper assessments a hassle. We developed C.H.A.T. to ease this pain, automating many of today’s time-consuming tasks, such as organizing assessments and calculating scores, and allowing professionals to focus on what’s really important—helping students with hearing difficulties enjoy the most successful educations possible.”
