## Roger for Education

Bridging the understanding gap

### What is it?

Roger is the new digital standard that bridges the understanding gap, in noise and over distance, by wirelessly transmitting the speaker's voice directly to the listener. Roger systems feature one or more wireless microphones, used by the speakers, and discrete Roger receivers that connect to students' hearing instruments or cochlear implants.

### Why use it?

Roger brings the teacher's words directly into the ear, boosting speech understanding and enhancing learning.

- **Maximum performance**

Roger offers the industry's best ever speech-in-noise performance, with proven improvements of up to 35% over Dynamic FM and 54% over other FM systems\*.

- **Zero hassle**

Roger eliminates the channel management headaches of the past. There is no frequency planning, no fitting software, no limit to the number of networks that can be used at one site, and devices are connected with just one push of a button.

- **Full compatibility**

Roger systems are available for almost every hearing instrument, cochlear implant, Baha- and soundfield system. Users of today's inspiro Premium teacher microphone can even upgrade this product to Roger for free – allowing speakers to simultaneously transmit their speech to wearers of Roger receivers, FM receivers and Dynamic SoundField listeners.
