

# Staying at home with Roger

The current COVID-19 outbreak brings about many challenges for a lot of families. Roger™ technology can help parents and children with hearing loss to facilitate daily life.

## Support schoolwork

To continue children's education seamlessly during this time, connect your Roger microphone to a computer or tablet. It provides optimized sound quality because it helps reduce background noise while making the teacher's voice louder and clearer.

## Make exercises

For children, making sure they stay active is crucial for their well-being. Regardless whether it is indoor or outdoor activities, there are plenty of fun ways to keep moving, but it can be a challenge when there is distance. Hanging your Roger microphone around the neck will help, because the clear signal is sent across the room or garden directly to your child's hearing aids.

## Play games

To beat the boredom playing a game with the whole family can be great, but sitting around a table with multiple people talking at the same time can bring listening fatigue. Placing your Roger microphone on the table helps, as it picks up speech signals automatically switches from one talker to another.

## Make video calls

Letting children speak to their friends or grandparents on video calls helps to stay connected. By connecting your Roger microphone via bluetooth to the phone, computer or tablet your children get a clear signal directly to their hearing aids while background noise is reduced.

## Cook with your children

Trying a new recipe or making dinner as a family is a nice way to involve everybody in the daily activities, but not always facing children when they are speaking can make it complicated to understand. Hanging your Roger microphone around the neck will help your child will hear you even if you are not facing each other.
