

Power hearing solutions

Access to more of life's conversations

PHONAK
life is on

Access to more of life's conversations

The power to understand speech and communicate in all situations is ultimately what clients with severe to profound hearing loss require.

Since the introduction of our first power hearing aid in 1978, we have continuously developed and maintained a proud history of solutions for clients with a severe to profound hearing loss. Our expertise, aspiration and dedication to help people access more of life's conversations is what continuously drives us to push the limits of technology and produce the most innovative solutions to overcome the toughest of hearing situations.

With the launch of the powerful Naida™ V,
Phonak has created a solution to provide
unmatched audibility and speech understanding.
Combined with the Roger™ portfolio, it opens
the door to an entirely new level of listening.

Naída V

Hear more than you can imagine

With the launch of the first Naída products in 2008, Phonak set the industry benchmark for innovative hearing solutions designed to meet the individual needs of severe to profound listeners. The Venture platform has now been further enhanced to target these specific needs with the introduction of the powerful Naída V.

Phonak Naída V hearing aids provide more output and access to sound thanks to innovative features.

Enhanced hearing performance

- More access to high-frequency sounds with SoundRecover2¹
- More audibility with up to 6 dB more output from the xUP receiver
- AutoSense OS™
- Binaural VoiceStream Technology™

Increased confidence and reliability

- 60% more robust than its predecessor
- Water and dust resistant (IP68 rating)²

Look and feel

- Smaller devices for more people

¹ Phonak internal study involving listeners with profound hearing loss and comparing to Naída Q90-SP or Naída Q90-UP with SoundRecover.

² IP68 indicates that the hearing aid is water resistant and dust tight. It survived continuous immersion in 1m of water for 60 minutes and 8 hours in a dust chamber as per the IEC60529 standard. No traces of dust were evident within the housing.

Enhanced hearing performance

More access to high-frequency sounds

SoundRecover2 is the world's first adaptive frequency compression algorithm, taking the benefits of SoundRecover to the next level. Even for those difficult to fit hearing losses where there is little usable high-frequency hearing, sound can be compressed to where it is audible. The adaptive behavior ensures that the lowering of high-frequency sound occurs only when needed. Therefore, sound quality of low and mid frequencies is maintained, while high-frequency sounds are made audible. SoundRecover2 provides clients with severe to profound hearing loss a true listening experience with its ability to produce an optimal balance between high-frequency audibility and sound quality.

More audibility and increased output

Severe to profound clients, especially those with a sensorineural loss accompanied by a significant conductive hearing loss, require additional power for a noticeable difference in audibility.

- BroadbandBooster: a new way of digitizing, sampling and filtering signals, boosts gain and output for loud broadband input signals — like speech — by up to 5 dB. Mid and loud incoming broadband signals are more audible without any distortion from peak clipping.
- New mechanical and acoustical design: the new xUP receiver for Naída V-RIC offers additional gain and output of up to 6 dB in the low frequencies without increased battery consumption.
- Naída V-SP, with a size 13 battery, offers an MPO comparable to the previous Naída Q-UP, with a size 675 battery.

AutoSense OS

AutoSense OS is the operating system at the heart of the hearing aid that always selects the best settings to automatically maximize hearing performance. With over 200 distinct settings to draw from, it accurately captures, analyzes and blends sounds in real time to precisely match a client's hearing environment. It allows clients to benefit from a seamless all-around hearing performance across different listening situations.

Binaural VoiceStream Technology

The greater the degree of hearing loss, the greater the challenge. For this reason, Phonak offers the most advanced features based on our unique Binaural VoiceStream Technology. It streams the full audio signal in real time and bi-directionally in both ears for improved sound quality and unmatched speech understanding.

Increased confidence and reliability

60% more robust

Clients with a severe to profound hearing loss rely heavily on their hearing aids and, therefore, expect durable and long lasting devices. Naída V will function in even the toughest environments.

- With a new glass fiber reinforced material, Naída V is now 60% more robust than its predecessor, giving you and your client optimal confidence.
- Water and dust resistant with an **IP68 rating**.

Look and feel

Smaller devices for more people

- The fitting ranges of Naída V-RIC and Naída V-SP have been extended towards more severe losses, allowing many clients to be fit with smaller devices than before.
- 25% thinner than its predecessors, making them more comfortable to wear and less visible.

The right amplification

Three models for those needing the most powerful hearing aids, including a RIC.

Phonak Naída V-RIC
xS receiver

Mild to moderately severe hearing loss, all audiometric configurations.

Phonak Naída V-RIC
xP receiver

Mild to severe hearing loss, all audiometric configurations.

Phonak Naída V-RIC
xUP receiver

Moderate to profound hearing loss, all audiometric configurations.

Phonak Naída V-SP

Moderate to profound hearing loss, all audiometric configurations.

Phonak Naída V-UP

Severe to profound hearing loss, all audiometric configurations.

■ Power SlimTube II ■ Hook / mini hook

Always on target

In collaboration with Otometrics, Phonak has developed a new automated guidance system for real-ear measurements. TargetMatch, available in Phonak Target™ when installed under NOAH, will assist you through the process of probe tube placement, real-ear measurements and automatic or manual target matching.

TargetMatch integrates Phonak hearing aid fitting and fine tuning parameters with Otometrics' AURICAL freefit hardware and software, enabling you to fit and verify hearing aids directly from Phonak Target, resulting in fast and high-quality Phonak fittings for power users.

Visit www.otometrics.com/aurical for more information on AURICAL from Otometrics.

Power hearing solutions

The ability to effectively communicate is at the forefront of clients' expectations. Whether in a restaurant, at work or in the comfort of one's home, understanding speech is essential to leading a fulfilled life.

Even the most advanced hearing aids have limitations at a distance and in noise. State-of-the-art wireless microphones are therefore required to bridge the understanding gap. This is where the Roger microphone portfolio excels. This dedicated solution opens up the listening landscape for severe to profound clients.

Naída V hearing aids partnered with Roger microphone technology effectively overcome any listening challenge. By covering the different listening situations this hearing solution will significantly enhance client satisfaction.

As long as the distance is short and the noise level is not too high, hearing aids perform very well in the near field. As soon as the distance between the speaker and the listener expands or the noise level increases, microphones like Roger are needed to maintain a high level of understanding in the far field.

Roger

Hearing better than people with no hearing loss

Roger products are scientifically proven to help capture more words, in noise and over distance, bridging the understanding gap and bringing conversations back to life.

A study conducted by Linda Thibodeau revealed that hearing aid wearers start to hear better than people with no hearing loss already at 60 dB(A). But the most impressive results were achieved at a noise level of 75 dB(A). In this range, the hearing aid wearer is capable of understanding 62% more when using Roger than people with no hearing loss.

Linda Thibodeau PhD (2014). Comparison of Speech Recognition With Adaptive Digital and FM Remote Microphone Hearing Assistance Technology by Listeners Who Use Hearing Aids. The American Journal of Audiology. Volume 23, 201-210, June 2014.

Bridging the understanding gap

Consisting of microphones and accompanying receivers, Roger functions by picking up the voice of a speaker and wirelessly transmitting it to the listener while reducing background noise.

Full speech clarity

The Roger signal is adaptively mixed with the hearing aid microphone signal. In high noise levels, the gain of the Roger receiver is increased automatically, keeping the Roger signal clearly audible above the background noise. The hearing aid microphones remain active to give access to the acoustic environment and control over the listener's own voice.

The Roger and directional settings are an exclusive Phonak feature that allows power users to simultaneously hear people at a distance and in close proximity. The Roger and directional feature provides improved access to speech understanding through its ability to adaptively activate directional microphones on the hearing aid based on the noise level.

Hassle-free

Roger microphones are fully automatic and adjust their settings to the surrounding noise levels, making them easy to use. With no programming software required, Roger runs on 2.4 GHz, a worldwide freely-accessible bandwidth. More Roger highlights include:

- Multiple microphones and receivers can be connected in one single network — unlike simple single partner omni-directional Bluetooth™ microphones.
- The new RogerReady feature in Naída V automatically activates the "Roger + Mic" program without the need for any extra programming of the hearing aid, so a Roger receiver can be added at any time to Naída V, hassle-free.

Multi-functionality

The fully automatic signal processing found in all models of the Roger microphones offers a versatile solution that covers a wide range of listening situations effectively. Additional Roger features include:

- TV and multimedia connectivity
- Wideband Bluetooth™ in the Roger Pen

Roger at work

Focus on work rather than hearing

The new Roger Table Mic is the latest addition to the Roger portfolio and is specifically designed for clients in a working environment. Meetings often cause hearing difficulties for people with hearing loss. This is due to a number of reasons, including side conversations, surrounding noise or the distance between the listener and someone speaking at the other end of a table.

By simply placing Roger Table Mic on the meeting table, the spoken words of the participants can be distinguished, and background noise is reduced by intelligent algorithms.

Unique to Roger is the possibility to:

- Have conversations in noise and over distance with multiple talkers by giving each a Roger microphone connected in a MultiTalker Network.
- Cover large meetings by using multiple Roger Table Mics in a MultiTalker Network.
- Cover large meetings with a presenter by using multiple Roger Table Mics for the participants sitting at the table and another Roger microphone that can be worn by the presenter.

Roger for all situations

From the flexible Roger Pen to the new Roger Table Mic, there is an advanced Roger microphone that offers a solution for every client's needs.

The all inclusive Roger Pen

The Roger Pen offers state-of-the-art wireless technology with superior speech-in-noise and over distance performance. Packed in a discreet design, its features include fully automated or manual microphone settings and Bluetooth connectivity, providing an all-inclusive listening experience.

The simply smart Roger EasyPen

The Roger EasyPen is an exciting product for clients who desire ultimate simplicity with full Roger performance and do not need Bluetooth functionality or manual microphone control. Featuring premium speech-in-noise and over distance performance, it is the smart solution to overcome difficult listening situations.

The most powerful partner microphone Roger Clip-On Mic

The Roger Clip-On Mic is a discreet and lightweight microphone with industry-leading speech-in-noise and over distance performance. Worn on a shirt, it is a powerful stand-alone partner microphone which can also be used together with other Roger microphones, allowing communication between multiple speakers.

The dedicated microphone to fully participate Roger Table Mic

The Roger Table Mic is a microphone for working adults with a hearing loss who participate in small and large meetings. This unique solution picks up speech at a meeting in a way unlike any other product on the market. For larger meetings it's possible to use several Roger Table Mics. With outstanding operating time and the included remote control, it is convenience at its best.

Find out what receiver type your client needs: www.phonakpro.com/roger-configurator

Compatibility

With three Roger receiver types available there is a solution for every client, regardless of the hearing aids or cochlear implants they currently use.

Roger design-integrated receivers

These discreet Roger receivers are designed with the same appealing esthetics and smooth lines as Phonak hearing aids. They are water resistant and come in the same colors as the hearing aids. In addition they are available for the Naída CI by Advanced Bionics and Nucleus 5 and 6 by Cochlear.

Roger X

The miniature universal Roger receiver with 3-pin Euro plug is compatible with virtually all BTE hearing aids, cochlear implant speech processors and streaming devices.

Roger MyLink

The Roger MyLink is an easy-to-use and affordable body-worn universal Roger receiver that works with any hearing aid or cochlear implant that features a telecoil – from Phonak or any other manufacturer.

Life is on

We are sensitive to the needs of everyone who depends on our knowledge, ideas and care. And by creatively challenging the limits of technology, we develop innovations that help people hear, understand and experience more of life's rich soundscapes.

Interact freely. Communicate with confidence.
Live without limit. Life is on.
